

Wet Wipe Closures

BEARDOW **ADAMS**™

Unique Adhesives

Keep the **LID ON** ADHESIVES FOR SUPERIOR PERFORMANCE

High performance adhesives for wet wipe packages

Wet wipes have never been more popular than in recent times. It's now more important than ever that products designed to clean, protect, and disinfect across a range of baby, cosmetic, toilet and household applications, are kept in perfect condition and not allowed to dry out.

Whether you use hard plastic lid closures or open and close labels for wet wipe packages, our adhesives offer the **high adhesion**, **temperature performance**, and **resistance** that your packaging demands.

Reliability is key when it comes to our hot melts - particularly when they are used again and again. At Beardow Adams, we use advanced formulation technologies and the latest raw materials to ensure lid closures and labels stay shut during transport and long after their first use.

Available with high, medium, or low tack properties, to suit a range of PET, HPDE, LDPE and laminate packaging, we have a range of hot-melt adhesives to suit your exact requirements. And if we don't have the right adhesive 'off-the-shelf', our team of adhesive experts can develop one for you.

Trusted by wet wipe manufacturers across the globe, our adhesives help protect not just the wipes, but your brand and reputation as well.

Key benefits

- ✓ Adhesives for hard plastic lid and label closures
- ✓ Strong adhesion performance on PET, HPDE, LDPE and laminate packaging
- ✓ Chemical resistant
- ✓ Clear in application
- ✓ Wide temperature performance
- ✓ Suitable for jet application
- ✓ Supplied in an easy to handle form: EcoBlock™
- ✓ High, medium, and low tack grades
- ✓ Custom solutions available
