

A photograph of a car's interior from the driver's perspective. The view is looking out through the windshield at a long, straight road with a white dashed center line, stretching into a vast green field under a cloudy sky. The car's dashboard, steering wheel, and rearview mirror are visible in the foreground.

Automotive and Transport Adhesives

BEARDOW **ADAMS**™

Unique Adhesives

ADHESIVES TO KEEP YOUR BUSINESS ON THE **MOVE.**

Automotive manufacturers across the globe have been using our adhesive technology to bond interior fittings and panelling, acoustic and vibration damping, filter assembly, gasketing, and many other components for decades.

Offering good **adhesive strength**, **high initial tack**, suitability to various **material combinations**, as well as excellent **heat and climate resistance**, our hot melts support efficient manufacturing processes and match the requirements of individual components.

Our highly advanced range includes adhesives that can bond reconstituted felt, foams and mineral wool, amongst others, for insulation and sound deadening applications, as well as textiles, foams, rubber, plastics, metal, wood and mineral for interior fittings and assembly applications.

Continuous development of our hot melt, water-based, and pressure sensitive adhesives means customers benefit from value adding performance, including products that are flame retardant and available with UV stabiliser.

Switching to our adhesives could not be easier, with an expert team on hand to guide customers throughout the entire journey, from initial audit and assessment, grade suggestions and development of custom products, to the supply of free samples and full support throughout the production line changeover.

KEY BENEFITS

- ✓ Hot melt, water-based and pressure sensitive products
- ✓ Good adhesive strength
- ✓ High initial tack, instant bond with minimal pressure
- ✓ High peel strength, tough lasting adhesion
- ✓ Excellent heat and climate resistance
- ✓ Available with UV stabiliser
- ✓ Flame retardant options
- ✓ Suitable range of material combinations
- ✓ Optimised for most application methods
- ✓ Technical service and support
- ✓ Remote and onsite line auditing
- ✓ Continued product development

APPLICATIONS

INSULATION & SOUND DAMPING

Pressen™ pressure sensitive adhesives deliver outstanding performance for insulation and film lamination, self-adhesive coatings of insulation materials, foam bonding and assembly, acoustic and vibration damping membranes, self-adhesive coil isolators, water shedders, and gasketing.

COMPONENT ASSEMBLY

Designed for demanding component assembly applications, Prodas™ adhesives' broad adhesion range is ideally suited for headlamp, clips and fasteners, interior panelling, as well as heavy layer lamination, and textile and non-woven bonding.

FLOORING & INTERIORS

Water-based Prodacoll™ adhesives are engineered to bond PVC flooring, most plastics, wood, leather and synthetic leather, textiles, cotton fibres or wood fibres primarily for interior applications. They are used by bus, train, tram, caravan and motorhome manufacturers worldwide.
